

# Clipsal Surge Protection Device (SPD)

Help to protect your valuable electronic appliances from voltage spikes

Do you know that modern Australian homes are estimated to have \$15,000 worth of electronics unprotected against voltage surges? Traditional appliances, such as TVs, fridges and washing machines, just to name a few, are becoming smarter every day. These smart appliances are made up of sensitive electronic components which may be more susceptible to surge damage risk.

Many people think that they are protected by having surge protected extension cords or power boards for their computers and home theatre appliances. However, sadly these only offer limited protection and only for the devices connected to them. Other appliances such as washers, dryers, refrigerators, and stoves are generally plugged directly into standard power points which need to be protected against voltage surges with a Clipsal Surge Protection Device (SPD) located in your switchboard.

Lightning strikes, power surges and voltage spikes are nasty and can destroy your electronic equipment in an instant. You've invested a lot of money in your appliances. Just imagine discovering your big-screen TV, audio system or beloved coffee machine have been damaged and are instantly irreparable...it just isn't worth the risk. A Clipsal Surge Protection Device, installed in your switchboard, will help to protect your electronic appliances and valued possessions from such harmful surges and spikes. Ensure you have the right protection for your home.

## Key benefits:

- One device helps to protect your whole home
- Avoid disruption to your personal and/or professional connectivity
- Help improve the life of your electronics by protecting them from small surges occurring regularly
- Low cost of protecting whole house with single device compared to replacement cost of appliances
- Peace of mind knowing that your valuable assets have additional protection against voltage surges/spikes
- Confidence in your brand choice with Clipsal's 100 years of expertise in helping make Australian homes safer
